

THE ONLY SYSTEM DESIGNED
EXCLUSIVELY FOR THE BILLBOARD MARKET
BY BILLBOARD SAFETY EXPERTS.

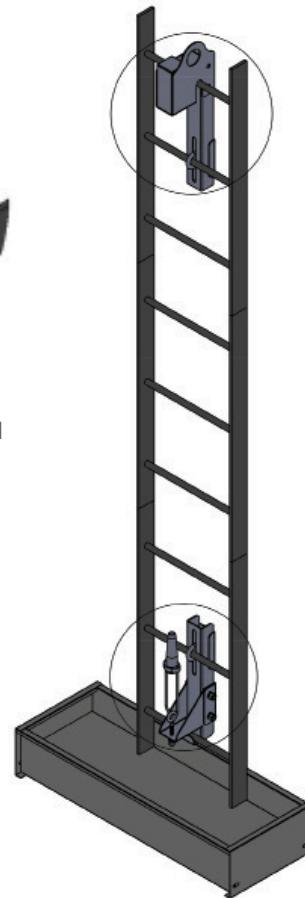

100% HOOKUP FROM GROUND TO DECK

Formetco developed the only system that protects the worker from the ground through the transition to the upper catwalk.

LOWER FIXED LADDER

UPPER FIXED LADDER

Rear mounted with an integrated intermediate anchorage point

SAFE, SEAMLESS, SIMPLE

SAFE MOUNT – Mounting hardware is located behind the ladder rungs, creating a safer climb with greater ladder access area. This placement minimizes clothing catches and bodily harm such as cuts, scrapes and bruising from striking obtrusive hardware.

SEAMLESS JOURNEY – Whether ascending or descending, cable guides are designed to allow the cable sleeve to pass through with ease, providing a seamless journey from connection point to disconnect. This design innovation allows the climber to keep both hands free to focus on climbing.

SIMPLE INSTALL – The top bracket rests on the ladder rungs, making this the fastest and most cost-effective installation of any system available today.

LADDER-GRAB + LADDER STABILIZER

The Formetco Ladder Stabilizer is the **FIRST STEP** in protecting the climber from the ground to the deck

The Ladder Stabilizer fits all extension ladders. The Stabilizer's trough is designed to position ladders at an angle of 75.5°. A pin, secured with a lanyard, locks the ladder in place satisfying OSHA standard 1-1.14 Section II-5

Workers are able to climb without holding a rope, or ratchet to tie off ladder

BILLBOARD INDUSTRY BEST WARRANTY

Designed and engineered to meet
ANSI A14.3
ANSI Z359.16
OSHA 1910.29
